**Subject:** Re: AltEn...Fwd: Response request

I forgot to mention, Eric and I plan to depart for the site at 0800. I think it is supposed to be -6F at that time. I have plenty of warm clothes and I am not too worried, but are you aware of any work restrictions for low temp work?

I also don't want to put the RP's workers at undue risk. I am hoping we can find an area down stream that is ahead of the release and block the flow. If the material freezes at that point, I believe they could just excavate the ice? We will just have to see.

>  
> Doug arrived at the AltEn facility at approximately 1500 hours on Saturday, February 13. Upon arrival, Doug met with Kirk Morrow of NDEE and they proceeded to the facility to begin an evaluation and assessment of the source of the release. The release originated at a 4 million gallon aboveground storage tank. The tank ruptured during the cold weather, releasing a majority of its contents. The tank's contents, a mixture of liquid stillage and manure, flowed past the facility boundaries and into an agricultural drainage ditch. AltEn focused their initial response on the facility property, where they constructed berms and used a vacuum truck to siphon liquids. The siphoned material was added to facility lagoons. In addition, a second 4 million gallon tank has been insulated against the cold to prevent a similar, second release. AltEn also attempted to create dams in the agricultural drainage ditch to impede or slow the spill from traveling further; however, at this point, the spill continues to advance. Doug spoke with the General Manager for the PRP group on Saturday evening and recommended the response effort shift to the drainage ditch and attempting to stop any further spill advancement. Doug and START collected liquid and sediment/sludge samples from points near the impacted tank and along the drainage ditch. Doug is planning to return to the facility on Sunday, February 14, along with START, to collect additional samples and further evaluate the extent to which the spill has advanced.

> I just talked to Danny O'Connor, Section Chief with our removal program. Doug Ferguson, OSC, just got up to the scene recently and he's meeting with the senior responder from Nebraska, Kirk Morrow. Doug has contractor support with him. Kirk has been with the Nebraska program a long time. They're getting together on the results of sampling and what needs to be sampled, etc, and then they're trying to make contact with the facility. That's where we are right now. I'll let you know when they make contact with the facility and see if they can get any more commitment for responsive measures from the PRP in place.
